01

The stairs have some unique features: metal structure of the stairways is combined with the base of the fireplace into a single architectural form. Stair handrail is "floating" in the air with no visible pillars – it leans on the curved glass on the landing. The stairs structure relies on two points: the floor of the first floor and ceiling of the second floor, and the landing of the stairs hangs in the air gracefully without any support. Stairs are decorated with high-quality painting. Material of steps – hangar larch.

\$45000
WITHOUT WOOD

02

Each step is illuminated from the inside through onyx. Each stone part is mounted on a glass substrate to avoid shadows from the metalwork of the steps. Wood trim material – American walnut. Steps material – onyx. Fence racks material – cast and turned parts with aged surface.

\$50000
WITHOUT WOOD
AND ONYX

The author of the idea – Marina Pugacheva. Wood finish – "SV Group".

03

The structure is installed in the middle of the pool with the "goldfish". The stairs are approached through the glass bridge over the water. Glass steps and railings provide complete visibility of the spiral of a chameleon-painted staircase.

\$35000

04

Stairs fencing made of polished brass. The key feature of this fencing is the rivet assembly. Elements of industrial style in the railing make it look like a complex and elegant product.

\$1000
PER METER

05

Stairs in a children's clothing store. A distinctive feature of this staircase is a wooden insert in the center of each step which seems as thin as a rug thanks to its creative design.

\$20000
WITHOUT WOOD

06

Stairs in a wooden house. Each march of this staircase relies on jacks to compensate for the house shrinkage.

\$17000
WITHOUT WOOD

07

Stairs in a perfume store. Kosoura material – polished stainless steel. The steps material – marble.

\$20000
